The NicoNico kids size guide

To check whether your printer has not enlarged or reduced the measuring bar, a centimeter measure is shown on the right, which you can compare with a measuring bar.

Place your child's foot with the heel at the indicated location and measure to the very tip of the longest (big) toe. The heel protrudes slightly above the ground, take this into account. If you are in between 2 sizes suit you take the largest size. Children tend to pull their toes in, then gently press them down or let the child wiggle back and forth on their feet for a moment.
